PROFESSIONAL SUMMARY

Data & Business Intelligence Analyst with 5+ years across hospitality, fintech and manufacturing. Built SQL Redshift ETL pipeline, Tableau prep flows, revenue forecasting models and executive dashboards that Revenue Management, Finance, Marketing teams rely on, including an $8M revenue forecast for FP&A planning and 20+ Tableau dashboards adopted as the standard performance view across 3 business lines. Present findings through data storytelling to non-technical stakeholders while supporting operations across US and European markets

WORK EXPERIENCE

Data Analyst, Hornblower Group **Jun 2023 – Present**

- Designed and implemented **A/B testing** to compare dynamic and static pricing across alternating weeks; applied a **t-test** to assess **statistical significance** and observed **+18% revenue per event** with dynamic pricing
- Engineered ETL pipeline using Python based AWS Glue jobs to process over **1 million customer bookings** via **Redshift** to measure promo code performance, presenting a **12% lift in average order value** that informed Marketing's promotional spend decision making
- Built a **sales pipeline dashboard** in Tableau joining **Salesforce Opportunities, Accounts and Leads** with RFPs, **Google Analytics** and order data, giving the sales team a full funnel view from web traffic to booked order
- Deployed **20+ Tableau dashboards** built on **SQL** data models across **Redshift** and **Snowflake**, tracking lead conversion, booking revenue and event occupancy across 3 business lines, giving stakeholders a standardized view of performance for pricing and capacity decisions
- Built an **LLM-powered competitor pricing agent** using SQL queries across **Redshift** and **Tableau Prep workflow** to monitor **8 competitors**, replacing manual reviews with daily alerts that gave leadership visibility into competitor pricing and product changes
- Collaborated with Finance to create a **Forecasting Model** using Advanced Excel for FP&A monthly planning, projecting over **$8 million** in revenue across a rolling 3-month horizon using booking trends and pacing patterns, achieving **3% in-month MAPE**
- Supported **8% YoY growth** in average check value by developing a **Power BI** consumer spend analytics tool that segmented preboard and onboard revenue and identified customer spending behavior funnel to inform pricing adjustments

Business Intelligence Analyst Intern, Yokohama Off-Highway Tires America **May 2022 - Aug 2022**

- Delivered **5+ Power BI** dashboards using **DAX and Power Query**, tracking regional sales growth and product mix, consolidating reporting into a single performance view used by sales teams to identify regional opportunities and prioritize sales initiatives
- Established consistent data quality standards across **2M+ rows** of sales data from regional sources, resolving product, region and location inconsistencies to create a reliable 5-year dataset for market share analysis
- Created a sustainable **SQL data warehouse** consolidating 5 years of sales data by location, tire category, enabling leadership to identify regional growth opportunities and refine sales strategy
- Automated **USTMA** and **AEM reporting workflows** using **Python**, cutting report preparation time by **40%** and standardizing recurring reporting across business cycles

Data Science Analyst, LUMIQ **Feb 2020 - Aug 2021**

- Calculated **key credit risk metrics** (Probability of Default, Loss Given Default, Exposure at Default) using logistic regression and portfolio analytics, providing the team with actionable insights for provisioning credit line strategies and risk segmentation
- Customized an end-to-end conversational AI pipeline using Rasa on financial data, assessed use of **5 modules** improving intent classification accuracy by **10%** across 2 million customer queries
- Designed SQL scripts to assess credit risk across **10 million transaction records**, identifying delinquency patterns and flagging high risk defaulter segments to support risk mitigation
- Automated information extraction from **100K+ legal documents** using ML frameworks for **KYC (Know your customer)** compliance, reducing human manual effort by **40%**

PROJECTS

Payments Fraud and Profitability Analytics (dbt, SQL, DuckDB, GitHub)

- Built a **dbt** (data build tool) project on 100K+ card payments data, modeling them into a star schema with an incremental fact table and **83 data tests**, showing a **0.40% chargeback rate** concentrated in electronics and gift cards
- Evaluated risk-score thresholds that detected **48% of fraud** while blocking **under 0.2% of payments**; found the paid customer cohort did not recover acquisition costs within **12 months**

SKILLS

Languages: SQL, Python (Pandas, NumPy, PySpark, Scikit-learn, Seaborn, Matplotlib), R(dplyr, tidyverse)
Applications: Data Modeling, NoSQL(DynamoDB), Data Visualization, Snowflake, AWS Redshift, BigQuery, Trino, dbt, AWS (S3,Glue), Data Warehouse, Airflow, Salesforce, Microsoft Excel, GitHub, Jira, Confluence, Agile Methodology, Process Improvement, Workflow Automation
Technical: Tableau, Tableau Prep, Power BI, Linear Regression, Clustering, Decision Tree, Random Forest, Hypothesis Testing, T-Test, A/B Testing, KPIs & Metrics Definition

EDUCATION

University of Illinois Chicago **May 2023**
Master of Science in Business Analytics
Relevant Coursework: Advanced Database Management, Machine Learning, Statistics in R, Data Mining in Business, Big Data Analytics, Marketing Analytics, Social Media Analytics, Supply Chain Management and Optimization

Jaypee Institute of Information Technology, Noida, India **Jan 2020**
Bachelor of Technology in Computer Science
